### Abstract of the Disclosure

An apparatus for metering a reducing agent, in particular a urea or a urea-water solution, into a mixing chamber, and for metering air and a reducing agent into the mixing chamber, these components form an aerosol in the mixing chamber, and are then dispensed into an aerosol line which connects to an exhaust system. The structure which generates the metered air delivery and the metered reducing agent delivery, and the mixing chamber are all secured at least partly to a block of a plastic or a metal material or are integrated with it.
